

PCCA Dermatological Bases

PCCA Exclusive Base	Part #	Description	Suggested for Use in
PCCA Biopeptide Biocosmetic™	#30-3377	<ul style="list-style-type: none"> • This advanced phosphate-based emulsion system is packed with high concentrations of the two biopeptides palmitoyl tripeptide-5 and palmitoyl pentapeptide-4 • This is an elegant cream designed for cosmetic facial use 	Anti-aging, cosmetic formulas
Chrysaderm® Day Cream	#30-3710	<ul style="list-style-type: none"> • Increases skin tone • Reduces the appearance of deep and medium wrinkles • Provides antioxidants • Decreases the skin aging process • Increases skin hydration 	Anti-aging, cosmetic formulas
Chrysaderm® Night Cream	#30-3711		
PCCA Clarifying™	#30-4845	<ul style="list-style-type: none"> • Easily accommodates a variety of APIs such as antimicrobials, benzoyl peroxide, tretinoin, alpha hydroxyl acids, beta hydroxyl acids, and many more • Supports healthy skin and decreases oil formation • Moisturizing properties for any skin type including oily skin • Natural ingredients that may improve the appearance of red blotchy skin • Reduces the chances of irritation because of its phospholipid emulsifiers • Non-comedogenic 	Formulations for conditions such as Acne, Rosacea, Oily skin, and anti-aging. Also suitable for compounds with benzoyl peroxide and hydroquinone.
PCCA Cosmetic HRT®	#30-3337	<ul style="list-style-type: none"> • Paraben-free • Petrolatum-free • Contains a mild, non-ionic emulsifier • Highly moisturizing 	Designed with topical hormone therapy in mind but can be used with ingredients such as ascorbyl palmitate, spironolactone and kinetin
PCCA Emollient Cream™	#30-3168	<ul style="list-style-type: none"> • All-purpose moisturizing topical thick cream base • Contains petrolatum and mineral oil • Heavy oil feel, takes longer to rub in • Great for sensitive skin • Vaginal use ok 	Both cosmetic and dermatologic applications with a wide variety of APIs (corticosteroids, keratolytics, and skin lightening agents)

PCCA Dermatological Bases

PCCA Exclusive Base	Part #	Description	Suggested for Use in
PCCA Lipoderm®	#30-3338	A validated permeation enhancing vehicle for deep-penetrating topical formulations • The first proprietary permeation enhancing vehicle in the compounding industry • Proven delivery • Physical stability – does not separate with refrigeration • Smooth, creamy and non-sticky base that absorbs quickly into the skin	Traditionally used for pain therapy, however it can also be used to enhance penetration of certain APIs in dermatological formulas (for example at concentrations of 20 - 50% with VersaBase Cream)
PCCA Occlusaderm®	#30-4449	Innovative Film-Forming Gel with superb adhesive properties • Once applied, although water soluble, it is impermeable and oil-resistant • When used alone, a film is formed on the skin, which can then be peeled off • When added with other bases, it will provide additional occlusive effects	Numbing creams, facial masks, acne preparations, skin lightening formulas, scar preparations, wart formulas
PCCA PermeE8® Anhydrous Gel	#30-5038	Anhydrous permeation enhancing base ideal in formulations for acute or chronic pain (including neuropathy), nausea/vomiting, veterinary medicine, APIs that are unstable in water	May be used at approximately 20% along with WO6 to enhance permeation of certain APIs
PCCA Plasticized™	#30-3211	Polyethylene and mineral oil anhydrous gel base • Commonly used in dental preparations as well as topical anesthetics before laser treatments	Commonly used for topical delivery of numbing agents such as lidocaine base and tetracaine base
PCCA PracaSil®-Plus	#30-4655	Anhydrous topical silicone base • Contains pracaxi oil which is rich in skin-friendly fatty acids and lipids • Ideal for scar formulations as well as any skin conditions requiring barrier protection and moisturization	To improve the appearance of both new and old scars
PCCA Spira-Wash® Gel	#30-4678	Water-washable wound care base • Soft, opaque polyethylene glycol (PEG) ointment base • Adherent base • Maintains a moist environment • Provides occlusion	A good choice for wounds, ulcers, burns, sores, and cuts

PCCA Dermatological Bases

PCCA Exclusive Base	Part #	Description	Suggested for Use in
PCCA Vanishing Cream Light™	#30-3295	Petrolatum-free, paraben-free and non-comedogenic medium-thickness topical cream base • Moisturizing • Good for sensitive skin	Formulations are available with a myriad of APIs including coal tar, tretinoin, azelaic acid, salicylic acid, corticosteroids, ascorbic acid, testosterone, niacinamide and hydroquinone.
VersaBase® Cream	#30-3641	Ideal cream base for all topical and vaginal preparations, including HRT • Non-comedogenic • Hypoallergenic • Nonirritating • Oil-free, petrolatum-free, paraben-free, propylene glycol-free • Odor-free • Long lasting moisturizing effect • Stable over a broad pH range (3.5 – 12) • An elegant yet durable cosmetic cream • No "pilling" on the skin	Bioidentical hormones, corticosteroids, vaginal, antibiotics, antifungals, sunscreens, anti-aging and anesthetics
VersaBase® Foam	#30-3654	Innovative foam base for topical use on the skin • May be used to compound leave-on foams or foam cleansers (wash off) • Natural surfactant technology to be gentle on the skin • Requires the use of a foam dispenser (PCCA #35-3533) to create the foam	Anti-aging facial and body cleansers; body care; dermatological products (topicals); make-up removers; sunscreens
VersaBase® Gel	#30-3656	Ideal gel base for topical and vaginal preparations, including HRT • May be used topically, vaginally and rectally • Can be used in combination with PCCA MucoLox to create vaginal and rectal preparations with enhanced mucosal adherence • Alcohol-free aqueous gel • May be diluted with up to 50% alcohol to easily create hydro-alcoholic gels • Excellent stability even in low pH formulations (pH 2 – 7.5) • May be used as a thickener or stabilizer for emulsions	Vaginal, rectal, male hormone replacement, female hormone replacement, cosmetic and dermatology (alpha-hydroxy acids, hydroquinone, steroids, certain anesthetics and more)

PCCA Dermatological Bases

PCCA Exclusive Base	Part #	Description	Suggested for Use in
VersaBase® Lotion	#30-3653	Ideal thinner topical cream base • Noncomedogenic • Hypoallergenic • Nonirritating • Oil-free, petrolatum-free, paraben-free, propylene glycol-free • Odor-free • Long lasting moisturizing effect • Low viscosity emulsion with good spreadability	Hormone replacement, vaginal, antibiotics, antifungals, corticosteroids, sunscreens, anti-aging, anesthetics
VersaBase® Shampoo	#30-4195	For all types of hair and animal fur that need pharmaceutical, cosmetic or liquid soap formulations • Made with natural surfactants and without sodium lauryl sulfate and parabens • Gentle shampoo that contains hydrating substances that help hair to be more malleable	Pharmaceutical and cosmetic purposes, as well as in liquid soap formulas
PCCA WO6® Anhydrous Topical Gel	#30-5039	Anhydrous topical base ideal for dermatological or cosmetic formulations and for APIs that are unstable in water	For formulations for Dermatology (acne, skin lightening) and Cosmeceuticals
PCCA XemaTop™	#30-4891	• Topical cream base developed for use in formulations for patients with eczema, psoriasis and dry skin • Nourishes the skin's structural integrity • Reduces the appearance of red and irritated skin • Helps restore the skin's barrier to prevent water loss	For formulations for eczema, psoriasis and xerosis. Also suitable for compounds with hydroquinone.
